

We have here, the X-ray glasses masterpiece creator, Dr. Smmugles!!!! Hello, Dr. Smuggles, let's start with these X-ray glasses straight away!!!

1. Are the X-ray glasses going to be used on airports for security?

A: Yes, there has been some deal going around with the airport company, but so far there aren't any agreements.

2. Would there be dosage for the glasses for people who cannot see very well?

A: Of course, everyone needs to see the magnificent view of these glasses! Ha Ha if you know what I mean...

3. If these glasses are going to be sold in stores, how much would it cost?

A: Glasses would vary between how "well" and "detailed" you are able to see through the X-rays. I mean, if it is sold in the "HD" form., it would be around 80 bucks, but if you wanna see in black and white, it would be like 9.99?

4. Can you use the glasses underwater?

A: We are currently working on that fact, and there is going to be a release of "underwater" X-rays a few months from now.

5. Are the glasses battery powered? If so, how long does it last?

A: As long as you don't use the glasses for bad purposes, (if you know what I mean) then it would last for a good 14 hours.

6. Do these glasses give the same effect as normal X-rays on hospitals today?

A: Are you kidding? Even better! Man, these glasses are in COLOR, and in HD!!! Come on, hospital X-rays are old-school.

7. There are rumors that these glasses provide color to the objects that are X-rayed. Is this true?

A: Yes!! We are the first company ever to invent these color-X-ray glasses! You better not use them in a bad way though. Be careful, son!!!

8. Are the glasses heavy?

A: Nah, they're pretty light. If you're head is heavy it would be, but as long as your head is not on the way, they're lighter than a feather.

9. They say that these glasses might release radiation. Is this true?

A: Uhhh... I mean come on, a little bit of radiation can't do anything! Besides, uhhh a little bit of radiation makes you cooler! Ha Ha...

10. Would this radiation that is released effect the people? Maybe a mutation?

A: A mutation? Come on!! There is a little mutation. Maybe?? Ha ha .. but it won't do any harm though! Ha Ha!!! And if there is going to be a mutation, you can just forget about that and use them in a bad way, like.....

That was Dr. Smmuggles! X-ray glasses are in your close K-mart now!! Thank you!! CUT!!
